Hi Tom,

Here are EPA's responses to your questions,. As for the national hydraulic fracturing study, you need to email Julia Valentine valentine.julia@epa.gov She is the HQs press officer for Shale matters. -- Terri

Can you direct me to a link for the radiological data spreadsheet? I can't find it on the EPA's website [www.epa.gov/aboutepa/states/pa.html](http://www.epa.gov/aboutepa/states/pa.html)

Answer:  
<https://www.epaosc.org/sites/7555/files/Dimock%20Radiological%20Data%20Weeks%201-5%20and%201st%20Round%20Supplemental.pdf> This link will take you directly to the file. You can also go to [www.epaosc.org/dimock\\_residential\\_groundwater](http://www.epaosc.org/dimock_residential_groundwater). Click on Documents on the right side column. On the left side you will see categories. Look for Radiological Data. Click on that. Then look at the last page at the bottom.

Why were the radium test results not incorporated into the large spreadsheet "Validated data summary report for 61 households that were sampled"?

Answer: The formatting for the two spreadsheets is different. For example the column for "result" is wider.

Were the people in Dimock who had their water wells tested provided with copies of the radiological data spreadsheet?

Yes -- for their individual homes. The complete radiological spreadsheet, which includes all radiological data, was posted to EPA's web page
